

Ko Tahu-nui-a rangi

He aha tērā, e Koro?

**I kite ngā tāngata i ngā tūrama muramura e oriori ana i te rangi.
Ki ō rātou rā whakaaro, he muramura i puta mai ai i tētahi
temepara mīharo.**

The people saw lights and colours dancing in the sky. They imagined that the glow must be rising from a magnificent temple.

What were the lights the people saw?

Sometimes in the winter night sky you can see Aurora Australis. The bright dancing lights of the aurora are actually electrically charged particles that come from the sun. In the sky, an Aurora Australis takes the shape of a curtain of light and colour.

The child asks his koro "He aha tēra e Koro? What is it Koro?"

Koro replies "Ka Tahu-nui-a-rangi, the Aurora Australis!"
